Maze

1. Introduction

Maze is a software made for… well… generating mazes! And Caves! Read the task, damnit, I'm not getting paid for writing this!

2. Installation

Input "make install" to the console and, if you are not a newbee, but the Smesharik – all shoul work fine.
If it says smth 'bout GTK libs – input "make download_aps".
Else – google it, mf!

3. Instruction

You've got some buttons in a main window:
- New – generate a new maze of any size from 2 to 50 in width and height
- Load – load maze from file
- Solution – make a solution, choosing the coordinates of your starting and ending point
- Save as… - nuff said
- Cave – cave mode

Cave window is similar, I'm too lazy to write anything 'bout it…
